Phone: +91 7498682506 — Email: p.rohit.2310@gmail.com — LinkedIn: linkedin.com/in/prohit23 — Portfolio: rohitpatil.tech

Summary — Full-Stack & AI Software Engineer specializing in distributed systems, microservices, and autonomous agent orchestration. Proven track record of delivering end-to-end features from zero-downtime backend migrations to LangGraph powered multi-agent systems and Model Context Protocol (MCP) integrations across React.js/Next.js, NestJS, and Django. Seeking to build high-impact, scalable AI solutions for a world-class product team.

Skills

- **Languages:** Python, JavaScript (ES6+), TypeScript, Java, SQL, PHP
- **Backend:** Django, Django REST Framework, NestJS, Node.js, Express.js
- **Frontend:** React.js, Next.js, Tailwind CSS, HTML5, CSS3
- **AI/LLM:** LangGraph, LangChain, Model Context Protocol (MCP), OpenAI Agents SDK, OpenAI Responses API, RAG, Graph RAG, Qdrant, Embeddings, Harness Engineering
- **Databases:** PostgreSQL, MySQL, SQLite, MongoDB, Redis, Qdrant, Neo4j
- **DevOps & Concepts:** Docker, Kubernetes, Jenkins, Git, GitHub Actions, CI/CD
- **Architecture:** Microservices, REST API Design, RabbitMQ, Message Queues, Event-Driven Design, System Design (HLD/LLD)
- **Practices:** Data Structures & Algorithms, Agile/Scrum, TDD, Code Review, OOP

Experience

Software Engineer – AI & Full Stack

Netwin Infosolutions · Nashik, India

August 2024 – Present

- Contributed to a multi-tenant eCommerce platform delivered end-to-end by the team, owning the custom admin panel and a dynamic logo-placement/product-personalization feature for domain-based storefronts.
- Delivered backend and frontend features across multiple existing Django applications during initial ramp-up, accelerating the team's Agile release cycle.
- Assigned to an AI-focused client project: built a RAG-based Q&A system and agent chat interface using LangGraph, LangChain, and Qdrant vector database to automate documentation workflows, reducing manual documentation effort by 60%.
- Learned and delivered Model Context Protocol (MCP) integration on the project, building an MCP server for Jira that lets LLM agents retrieve, query, and triage tickets programmatically.
- Engineered a zero-downtime migration from a single-tenant database to a multi-tenant NestJS/PostgreSQL architecture without a full rewrite; documented the approach in a published technical blog.
- Owned the CI/CD deployment pipeline (Jenkins → Docker → Kubernetes) for the platform, cutting deploy time 40% and achieving zero-downtime releases.

Software Engineer Intern – Backend

Netwin Infosolutions · Nashik, India

February 2024 – July 2024

- Built a production service-ticketing system with Django REST Framework supporting role-based workflows (admin, manager, technician), deployed as the backend for a live mobile application.
- Built the system's admin panel in HTML/CSS using Django's built-in UI templates for internal ticket and user management.
- Designed an auto-assignment engine using availability and workload scoring to allocate technicians, reducing unassigned ticket SLA breaches by 40%.
- Automated time-based billing calculations in Django, eliminating manual effort and reducing billing errors to near zero.

Education

B.Tech in Computer Engineering — CGPA: 7.65 / 10

R. C. Patel Institute of Technology · Shirpur, India

2020 — 2024

Projects

Agent Studio

github.com/rohit-p-droid/agent-studio

Next.js · Django · SQLite · Multi-Provider LLM Integration (OpenAI, Gemini, Groq, Claude) · RAG

- Built a multi-provider AI agent platform (Next.js frontend, Django backend) where users choose an LLM provider — OpenAI, Gemini, Groq, or Claude — supply their own API key, create custom agents with tailored instructions, and chat with them in real time.
- Developed a document Q&A (RAG) agent within the platform that ingests user-uploaded documents and answers questions against them, with the same provider/model flexibility available across the rest of the platform.
- Designed the agent configuration and conversation persistence layer using Django and SQLite, supporting multiple concurrent custom agents per user.
